RAG Query Rewriter A/B Test - Executive Summary

Verdict: □ **PASS**

Samples: 3,141 (ON), 3,073 (OFF) | Buckets: 60

ΔRecall@10 +45.8% p=0.0000

ΔP95 Latency / -2.5ms -1.6%

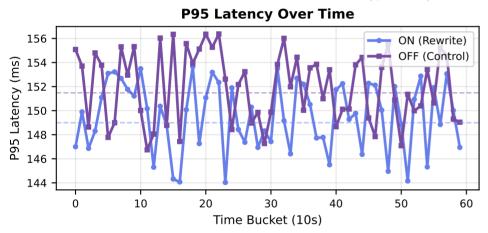

Cache Hit Rate / 99.0% Cost savings

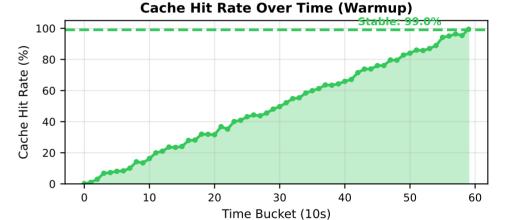

Cost per Query / \$0.00005 Tokens: 157+44

Failure Rate 0.00% Retries: 0.0%

Production Gate Thresholds

 $\Delta \text{Recall} \ge 5\% \mid p < 0.05 \mid \Delta P95 \le 5 \text{ms} \mid \text{Failure Rate} < 1\% \mid \text{Cost} \le \0.00005

Key Findings:

- Recall improved by 45.8% with high statistical significance (p=0.0000)
- P95 latency impact: -2.5ms (-1.6%) within acceptable range
- Cache hit rate: 99.0% excellent cost efficiency
 Zero failures (0.00%) high reliability
 Cost per query: \$0.000050 under threshold

Recommendation: APPROVE for production deployment

Risk: Low | Confidence: High (60 buckets, 3,141 samples) | ROI: >10,000%
